Abdisalam Abdirahman

IAM Support Analyst | Remote | Marysville, WA
salamraghe@gmail.com | linkedin.com/in/abdulsalam-ali-0869b42aa | github.com/salamraghe

SUMMARY

IAM support. I handle access tickets: users, groups, MFA, SSO, privileged account requests, and the notes that show who approved what. I wait for approval. I give the least privilege the job needs. I will not grant access because someone asked. I know when a problem is identity and when it is network, firewall, or VPN. Hands-on labs in Entra ID, Okta, Active Directory, and CyberArk, with screenshots on GitHub.

EXPERIENCE

CyberArk PAM Lab (Self-Hosted 12.6) | Home lab | October 2026
github.com/salamraghe/cyberark-pam-lab

- Built 5 Windows Server VMs on VMware Workstation (domain controller, Vault, CPM, PVWA, PSM) and onboarded Domain Admin service account svc-test into safe Lab-Admins on the WinDomain platform.
- Created requester jdoe through the PVWA REST API and made mgr1 the approver, so the person asking is not the person approving.
- Turned on dual control in the Master Policy. Ran Ticket 1001: jdoe requested, mgr1 approved, access granted, audit trail shows both sides.
- CPM password change failed with winRc 2245 (domain minimum password age). Fixed it with PowerShell Set-ADDefaultDomainPasswordPolicy -MinPasswordAge 0 and gpupdate. CPM rotated the password and the account showed Compliant.
- Ran a recorded PSM session to the domain controller (Tickets 1002/1003). Activities logged PSM Connect, window titles, and PSM Disconnect. Fixed the gray Connect button (session monitoring was off) and a PSM address pointing at the wrong IP.
- Removed jdoe from Lab-Admins when the work was done.

Okta SSO / MFA Lab (Okta Integrator Free) | Home lab | September 2026
github.com/salamraghe/okta-sso-mfa

- Created a test user and group SSO-App-Users, and assigned a SAML 2.0 app to the group.
- Set the app sign-on policy to Any two factors with Okta Verify enrolled on the test user.
- Proved SSO to the IAMShowcase test SP: assertion Status Success, Issuer Okta, Audience IAMShowcase.
- Revoked access by removing the user from the group. The app tile was gone and the account stayed in place.

Active Directory User Lifecycle Lab (Windows Server 2022) | Home lab | September 2026
github.com/salamraghe/ad-user-lifecycle

- Built domain controller ADDC01 in VirtualBox and promoted it for domain lab.local (AD DS and DNS).
- In ADUC, created OU LabUsers, users testuser and Leaver User, and security group Lab-Access-Group. Added testuser and confirmed it on the Member Of tab.
- Disabled Leaver User for the offboard.

Microsoft Entra IAM Operations | Live tenant lab | September 2026
github.com/salamraghe/entra-iam-lab

- Created Test User and Leaver User (Entra ID P2, no admin role) and security group MFA-Test-Group with Test User as the only member.
- Built Conditional Access policy Require MFA for MFA-Test-Group (include that group, Grant MFA, State On). Security defaults had to be turned off first. Confirmed with What If on Test User.
- Offboarded Leaver User: disabled the account, revoked sessions, removed the P2 license in the

Microsoft 365 admin center. Test User kept access.
- Set up SAML SSO with the Microsoft Entra SAML Toolkit enterprise app, assigned to MFA-Test-Group. Proved sign-in from My Apps (InPrivate) as testuser.
- Registered Entra OIDC Lab App with a jwt.ms redirect and ID tokens, assigned to MFA-Test-Group. Granted admin consent for User.Read after testuser hit Need admin approval. Proved the ID token in jwt.ms.

Security Officer | Oatridge Security Group | Present
- Monitor alarms and badge-in events.
- Report when someone badges who should not have access.

Security Officer | Securitas | 5 years
- Checked badges and granted access.
- Reported people, got access revoked, ran BOLO.
- Wrote a DAR (daily activity report) at the end of shift.

Sales Development Representative | HouseCall Pro | 8 months (ended)
- Escalated client security issues to the security team, checked accounts, joined calls to fix, followed up until closed.
- Handled confidential customer account data. Explained process to non-technical clients. Used CRM. Remote.

SKILLS

Identity: Microsoft Entra ID, Okta, Active Directory (ADUC), Conditional Access, MFA (Okta Verify), SSO with SAML 2.0 and OpenID Connect
Privileged access: CyberArk PAM (Vault, CPM, PVWA, PSM), dual control approval, password rotation, session recording, PVWA REST API
Access work: Onboarding and offboarding, group-based access, least privilege, separation of duties, access tickets, change documentation
Platforms: Windows Server 2016/2022, VMware Workstation, VirtualBox, Microsoft 365 admin center
Concepts: OAuth 2.0

EDUCATION

South Seattle College — Bachelor of Science, College of Business & Computer Marketing — 2024
